

Gujarat CCTV Integration Platform — from camera to alert and trace

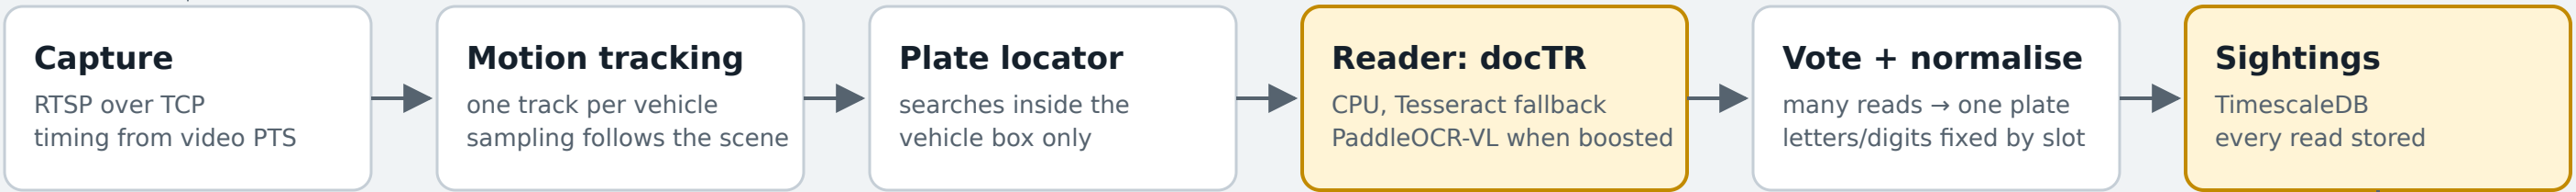

Hybrid architecture: Model 1 registry as control plane · Model 2 direct feed access · Model 3 adapters · analytics at the edge

1 · INTEGRATION

2 · EDGE ANALYTICS

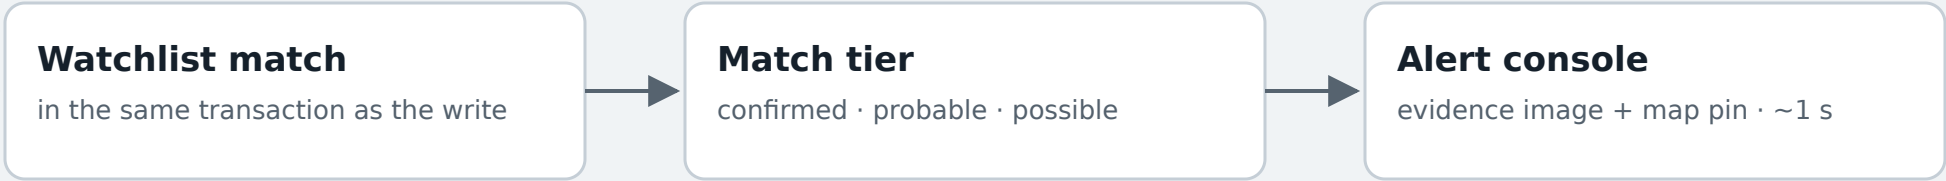

next to the camera

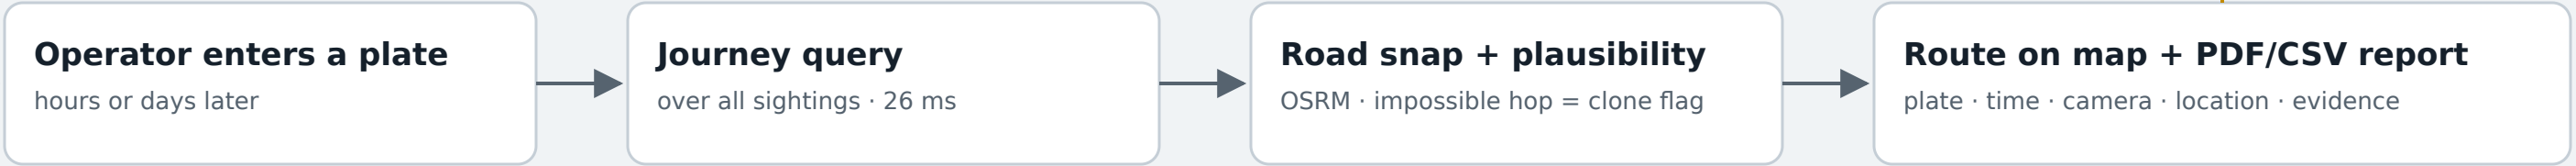

cameras near the last sighting → PaddleOCR-VL

3 · TWO PATHS

LIVE ALERTS

LATER TRACE

operator OCR boost: POST /api/ocr-boosts

Only metadata crosses the network (~0.5 kbit/s per camera).
Video moves only when someone watches.

Alerting and tracing never share code: one runs on every write,
the other on an operator's query. Both read the same sightings.
